RATCHET/RAKE ASSEMBLY, 4100-1MR-6, is a unique retractor to lift an incision site. The ratchet portion of the Rultract® Retractor operates as a winch. When lifting, tension generated on the Cable is transferred to the self-locking Gearbox. The ratcheting system (Fig. 01) gently and evenly elevates the sternum at approximate increments of 1 mm. per click and locks into place. Rake Plate and Rakes pivot independently to adapt to the configuration of the sternum.

Attaching Ratchet To Top Post
Back out (open) the non-removable Lock Knob until it stops (Fig. 02). The Crank Handle may be placed either to the right or left of the surgeon depending on preference. The Top Post has alignment marks and detents on the squared section for securing the Gearbox to the post. Slide the Ratchet onto Top Post to desired position between alignment marks. Placement of the Gearbox between alignment marks locates the Lock Knob directly over detent for proper tightening (Fig. 04). Tip of Lock Knob must completely insert into detent of Top Post to assure proper seating. Note opened and closed position of Lock Knob (Fig. 05 & 06). **CAUTION:** Hand tighten Lock Knob and Spool Cap Nut securely (Fig. 02).

Release or Reverse Ratchet
To release or reverse the Ratchet, firmly grasp Crank Handle and turn slightly (approximately 1 mm.) in the direction it will move. While maintaining tension on the crank handle, simultaneously shift Ratchet Lever COMPLETELY in the opposite direction to slowly lower site (Fig. 03).

Suggestions for Application and Removal of Rultract® Sternotomy Rakes

01. Gearbox should be positioned and secured in place at center of Top Post for average size patient.
02. Position Rakes at lower manubrium and lower sternum.
03. Place flat surface of the Rake flush against the sternal edge for secure grab.

The Ratchet mechanism will retract the operative site at approximately 1 mm. per click and lock into place after each click. Retract sternum slowly as dissection progresses medially. **Slowly elevate throughout procedure as needed for exposure. To release or reverse the ratchet, firmly grasp Crank Handle and turn slightly (approximately 1 mm.) in the direction it will move.** While maintaining tension on the Crank Handle, simultaneously shift ratchet lever **COMPLETELY** in the opposite direction to **slowly** lower site.

**OPERATOR’S VIEW:**
Operator’s view after placement of the retractor.
A) Fibrofatty areolar tissue.
B to B) After completing incision, gentle retraction and finger dissection exposes vessels.
C) Pericardium.

**PROPER PLACEMENT:**
Proper placement of rakes at lower manubrium and lower sternum. Parallel incisions 1 cm. lateral and medial to the internal thoracic vessels. Gentle retraction from the lateral edge of the pedicle helps in the dissection.
(A) Subclavian vein.
(B) Internal thoracic artery.
(C) Perforating branches.
(D) Lower manubrium.
(E) Lower sternum.

RATCHET/RAKE FASTENERS: CHECK FOR TIGHTNESS PRIOR TO STERILIZATION

** 4 pcs 4100-33  Rake Clamp Screw to mount Rake Clamps to Rake Plate.
** 2 pcs 4100P-05  Cover Plate Screw to retain the Cover Plate on the Gearbox.
** 1 pc 4100-15  Spool Cap Nut to retain Spool Cap Assembly.
** 1 pc 4100P-11  Cable Access Plate Screw to retain Cable Access Plate.
** 1 pc 4100-03A  Cable Set Screw to retain Cable in hub.

The following two items should not be removed. If these fasteners are removed a bolt retaining compound must be reapplied.

** 1 pc 4100-18  Crank Handle Screw to mount Crank Handle to Crank Arm.
** 1 pc 4100P-08  Crank Arm Screw to mount Crank Arm to Ratchet Shaft.

CAUTION: ** Check and tighten all fasteners on the Ratchet/Rake Assembly.
Failure to do so may result in components to loosen or disassemble during use.

CAUTION: ** Do not remove retaining Roll Pins *(4100P-18) and ***(4100P-16).

4100-50 Gear Box Assembly  4100-52 Rake Plate Assembly  4100-53 Crank Handle Assembly

Each Ratchet/Rake Assembly is sold with Sharp Tip Sternal Rakes. The supplied Sharp Tip Sternal Rakes on the Rultract® IMA retractor are designed for use on all patients. To secure elevation of the sternum without slipping the flat surface of rake should be flush against sternal edge. While retracting slowly, the rake tips penetrate the sternum.

**CAUTION:**
The supplied Sharp Tip Sternal Rakes on the Rultract® IMA retractor are designed for use on all patients. To secure elevation of the sternum without slipping the flat surface of rake should be flush against sternal edge. While retracting slowly, the rake tips penetrate the sternum.

**DULL TIP RAKE PLATE:** The Dull Tip Sternal Rake Plate Assembly is an accessory available for use with the fragile sternum. Use of the Dull Tip Rake Plate is at surgeon’s discretion. (See Proper Placement drawing, p. 4).

**ACCESSORIES:**

**SINGLE RAKE:** Remove the supplied Sharp Tip Sternal Rake Plate Assembly from the Snap Clip (Fig. 01) and replace with a single rake. Example: With an Extender Bar and Snap Clip, the unique lifting design of the Rultract® System may be used with a variety of single rakes. The optional Extender Bar gives direct upward lift of xiphoid area (Fig. 02).

</table>
Single Rake Use: Xiphoid Entry

Attach Extender Bar to end of Top Post and mount Ratchet Assembly. Remove Sternal Rake Plate Assembly from Snap Clip and replace with Xiphoid Rake (Fig. 01). After dissection is started position rake under xiphoid process (Fig. 02). Stabilize rake by hand (Fig. 03). SLOWLY elevate to insure proper placement. The ratchet mechanism will retract the operative site at approximately 1 mm. per click and lock into place after each click. Slowly elevate throughout the procedure as needed for exposure. Caution: Always stabilize the single rake by hand to elevate and expose operative site. Failure to do so may result in rake slipping.

REDO HEART SURGERY

For open heart reoperations, the incision is longer than usual at the distal end. Therefore, dissection is started under the xiphoid process. When a 1” to 1 ½” dissection is achieved, a wide blade attached to the Rultract® Retractor is inserted and the chest retracted, creating a tunnel under the sternum towards the neck. The dissection is made with a Bovie extender blade along with a hard plastic suction tip which is used to push the heart down from the chest wall. After the tunnel is complete, the wires are cut and removed. A sternotomy is then performed with a sternal saw.

Robert W. Stewart M.D.
Cleveland Clinic, Cleveland, Ohio

4100-39S: EXTENDER BAR with CROSS SQUARE (see p. 20)
Horizontal Position Into Hub: Extender Bar attached to Top Post positions ratchet over xiphoid area for direct upward lift of incision site (Fig. 04).

Horizontal Position Thru Cross Square for Right Angle Extension: With Armboard in place Cross Square feature provides proper placement of ratchet to chest wall by mounting Rultract® System above or below the armboard (Fig. 05 & 06).
**Right Angle Extender Bar and Short Top Post for Lateral Retraction**

Attach Right Angle Extender Bar with Lateral Guide to Short Top Post and mount ratchet assembly. Remove Sternal Rake Plate from Snap Clip and replace with single rake (Fig. 01).

**Fig. 01**

Lateral Guide

Simulation:
Direction of pull with Lateral Guide

To properly lock a Right Angle Extender Bar in the selected position the tip of the Lock Knob must enter the detent as you tighten securely (See page 20).

**CAUTION: LOCK KNOB MUST BE INSERTED IN A DETENT FOR SECURE PLACEMENT OF ACCESSORIES.**

---

**Rultract® Duhay Combination Clamp System**

**4100-40**

**Duhay Combination Clamp System**

Includes the following:

1. 1 pc. 4100-IMR-6 Ratchet/Rake Assembly with Snap Clip.
2. 1 pc. 4100-40AS Spline Short Top Post.
3. 1 pc. 4100-40B Right Angle Extender Bar with Lateral Guide.
4. 1 pc. 4100-32CS Spline Tip Bottom Post w/collar (square base).
5. 1 pc. 4110-S Square Base Combination Clamp.
6. 1 pc. 4100-60P-04 Pediatric rake, Single prong, blunt tip, 1/8" thick x 1/2" wide w/ radius end.
